

Digitization of Studies During Covid-19

The efforts by the governments across the world to ensure sustainability of learning in this moment of crisis, is revamping the whole education system. Digitised education and easy access to the internet is transforming the approach to learning with virtual classrooms, advanced learning tools and free educational content, especially in rural & semi urban areas. However, it cannot be overlooked that as the system shifts to e-learning, the digital divide in access to devices and connectivity will have a huge impact on the students belonging to the socio-economically backward category. They may risk falling further behind. Education systems have to ensure that these efforts do not further amplify the existing inequalities in access to learning and must pay heed to quality of education and equal access to resources for all. Though digital technology holds great promise to provide access to high quality learning, it may change the landscape of school education forever.
